Confirmed complaint. Could not get truck to start, it will only crank as if had no fuel prime. Used the hand primer and tried cranking once more. Engine almost started before crank tapered off from battery potential drop. Brought PTT out to the yard to perform initial diagnostics. Removed left fuse panel cover to access OEM OBD port. While PTT connected inspected fuel system for any obvious defects. Found the drain valve on the fuel water separator was leaking fuel. Was able to rotate the valve two full turns until tight. Tried to prime the fuel system once more and was able to get the engine to start. Refreshed DTCs and several fault codes related to ACM battery potential and loss of communication had cleared. This was in part because during cranking voltage was dropping below 10.8V which is the minimum required by the ACM to power up and power the EATS smart devices. Pulled unit into the shop and connected the battery charger. Only Fault Code (FC) P208E00 remains. DEF Doser Valve Clogged, ACTIVE, w/1 count. Performed DEF Pump startup, pressure rose to 136psi. (good). Next performed electrical checks at the DEF Doser. Verified signal voltage present at 1.5V and wiggled wiring; no change in value (good). Checked for resistance in the DEF Doser and found value on the fringe of failure - 14ohms +/- 0.2ohm. Expected range between 10 and 14ohms. Based on the above advise DEF Doser be replaced. Need to inspect into the base of the DPF to ensure there is no excess DEF buildup. If none is present codes are to be cleared and unit placed under a Crystal Sublimation. An estimate for the above has been submitted. (END) 7/16/26, 8775- Brought unit into shop. Replaced Dozer. Plugged PTT into unit tried to run Crystal Sublimation three times. It failed all three times. First time it failed was at 15% completed. Second time was at 26% completed. Third time it failed was at around 24% completed. PTT lost communication

Multiple times. Pulled it back into the shop and had the low DEF Light on for a split second. The only Code that was on was the Fuel and water Filter sensor.(END) 3230, 7/17/26; Connected PTT and verified fault P226413: Water in Fuel Sesor, Circuit Open, ACTIVE, w/3 counts. This code was present during Uptime diagnostics but was attributed to logging due to the loose drain valve. FC being active can be why the regen is cutting out. Advise additional time authorized to diagnose P226413. Components to be investigated are the engine wiring harness, FWS bowl that houses the WIF sensor, or a faulty ECM. (END) 3230, 7/21/26; Verified continuity across engine wiring harness. 0.5ohms resistance found between EB Pin 8 and B52 (WIF Sensor) Pin 3. 0.5ohms resistance found between EB Pin 10 and B52 Pin 2. Checked for resistance at the WIF Pin 2 and 3. Expected value for water is 100kOhm to 800kOhm, expected value for Air/Fuel 880kOhm to 1120kOhm. True value is 2.6mOhm (bad). At this time advise for the replacement of the fuel water separator bowl which houses the WIF sensor. Fuel water separator filter has non serviceable o-rings so the filter will have to be replaced. Advise the secondary filter be replaced to as a pair. Estimate with parts and labor has been submitted. Once repairs are complete codes to be cleared another attempt on a regen be performed. (END) 8247-7/23/26 Pull unit into the shop and remove fuel filters. Install FWS filter with new water bowl. Hook to PTT, shows no active faults. Start SCR clean regen and monitor parameters.(END) 8247-7/23/26 SCR soot sublimation regen went through successfully. All readings were good and soot level dropped to 26%. Cleared remaining codes, FWS system all clear with the new sensor. Soot warning and derate are still active on the dash, initiated dash reset and the test on PTT had incomplete information showing. Pressed play and showed complete, but did not

clear warning on the dash. (END) 7/24/26-6592 Hooked up PTT to unit to inspect for derate issue. Unit has no codes logged and is screaming derate on the dash. Utilized product data and found a mismatch on the ACM for the software, unit is missing software. There is a software update for the ECM/ACM. Performed software update. Unit no longer saying SCR derate on dash and the product info is showing ACM software now being read. Unit to go on test drive to verify repair. (END)
